

# Creating a Take a Test Link

1. Embed a link or create a desktop shortcut with:

ms-edu-secureassessment:<URL>#enforceLockdown

Example

ms-edu-secureassessment:https://forms.office.com/Pages/ResponsePage.aspx?#enforceLockdown

2. To enable printing, screen capture, or both, use the above link and append one of these parameters:

- `&enableTextSuggestions` - Enables text suggestions
- `&requirePrinting` - Enables printing
- `&enableScreenCapture` - Enables screen capture
- `&requirePrinting&enableScreenCapture` - Enables printing and screen capture; you can use a combination of `&enableTextSuggestions`, `&requirePrinting`, and `&enableScreenCapture` if you want to enable more than one capability.

If you exclude these parameters, the default behavior is disabled.

For tests that utilizes the Windows lockdown API, which checks for running processes before locking down, remove `enforceLockdown`. Removing `enforceLockdown` will result in the app not locking down immediately, which allows you to close apps that are not allowed to run during lockdown. The test web application may lock down the device once you have closed the apps.

## Note

The Windows 10, version 1607 legacy configuration, `ms-edu-secureassessment:<URL>!enforcelockdown` is still supported, but not in combination with the new parameters.

3. To enable permissive mode, do not include `enforceLockdown` in the schema parameters.
